These will determine the power at which you are going to The golf ball. Here is the value of each wind graph: White Wind Charttale is your long distance meter for the filming of the end-tuning using the wind system. Central Punto a € Á Á "01o Ring is á € Á Á "32o Ring is Á € á Á "63o Ring á € á € 9o Ring á € Á "10YLOW WIND CHARTIGLI determines the medium -range filming inside the wind system. Á € á € Á "á € Á Á "á € á € Á Á "á € á € Á Á "á € á € Á Á "Á Á "18th ring 20fondorally, this is double the values of the Wind Chart and of the Rings.Green Wind Chartreen is the short -range adjustment of the shots that uses the Wind Chart.Center Point á € 01st Ring á € you should use the values I showed above. Ideally, while using a white arrow graph, use a value of 2.3-2.4 to hit the blows. This point is just before reaching the first ring. Replace the camera with a rear view so that the arrow is facing outwards. Below is an example: now pull the arrow back until it aligns with the hole, where the 2.4-2.5 value should be. It should resemble this: note that your center should be the point where the Golf ball land. You can determine everything from that point on. The place where it lands your golf ball is the value of 0 from where the wind table starts to take effect. Follow the same method mentioned above and do nothing fantasy except the foundations that I showed you. You can see that the golf ball should be hit in the center. Take a note from where the ball lands, this will be your central point. From this point on, adjust for the short using the same method as shown above. In the case of the green rings, regular for a value of 9.8. It is possible to easily determine where 9.8-9.9 should be on the graph using the table of values I have shown allebat allebat al orteidni erarit iop ,amirp eroiretsop atsv anu rep aremacelet allied enoizaloger id odotem ossets ol eraf ,ovoun id .iremun itseuq ad otaived eresse non idniug ,otatnemua Á aserpir al rep erolav li am ,ollena omirp li Á ,aznatsos It sides up to be 9.8-9.9. Do not hit the golf ball at the Dead Center to make sure it makes its way into the hole. Sufficient practice is essential to hit the perfect eagles and shots, so be sure to do enough practice to Get a good take of this graph. How to hit non-dunk shots using the wind that already has learned in the above point how to use a wind table to hit the crushing shots. In this category, you will show you how you can hit non-dunk shots using the wind rankings. You can use your gut instinct to determine the center of the hole, but if you want to be sure where the center is, download and install a viewfinder from the Play Store. An example is the "Crosshair Hero" app in the Play Store. Download simple that, then start the game. Once you see that a tree or any other obstacle is obstructing your point of view, use the wind table first to determine where the hole might be. Then locate the center point using a viewfinder. Here's what it should look like: align it correctly with the center point of the wind table to perfect the shot. Now take the retro-view as I showed above and pull back to a value of about 6.4-6.5. Now all there is" you have to do Á " hit the ball at the perfect time to take the shot! You can hit a series of shots using this method like bounce, makeup shots and flag pole shots. Be sure to practice enough so you know how much value is aligned for the distance. For such types of shots, first, align the shot so that the arrow shows that the ball will enter. Next, pull the table back for a value of 6.8 next, Á is necessary to hit the golf ball perfectly and watch it navigate perfectly in the hole. Always use a top and back end view for these charts. Otherwise, you can easily miss even a few shots. Á is everything thereÁ? that I share in this guide on the use of wind card in the rival of golf. If this guide has helped you even a little, mention it in the comments below. It helps us immensely to publish more¹ content.
